## Introduction:

In this project, we use Elixir and Phoenix to make a Twitter engine. The functionalities of our project include:

1. Register account (Signup and Login via Sessions)
2. Account deletion
3. Send and distributing tweets
4. Follow users
5. Re-tweets
6. Querying Hashtags and Mentions.
7. Live feed

## How to run the code:

1. Extract the files.
2. Enter into the project folder via CMD and type the following commands:
3. `mix ecto.create`
4. `mix ecto.migrate`
5. `mix phoenix.server`
6. Go to <http://localhost:4000/>
